

Using EDG samples

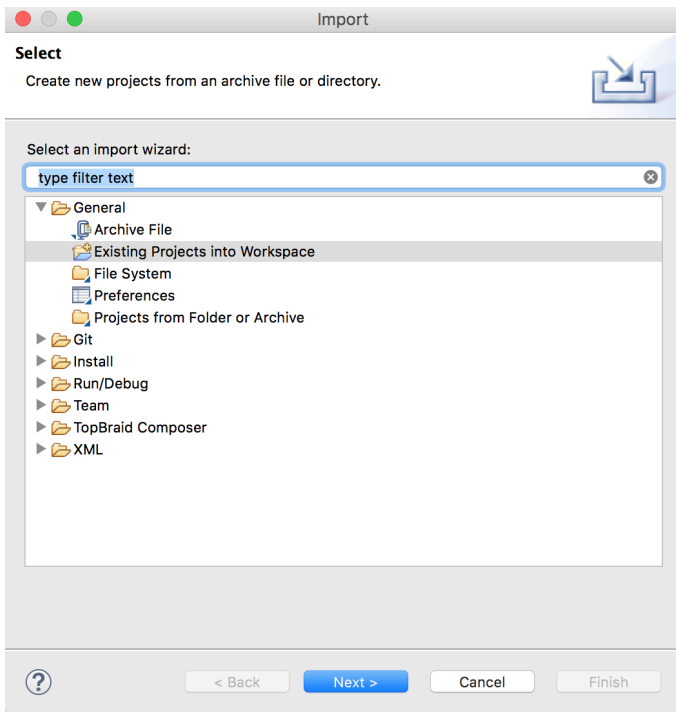

TopQuadrant provides sample data to use for training and getting starting in TopBraid EDG. Below are instructions on how to install the sample data in your environment.

TopBraid Composer Maestro Edition

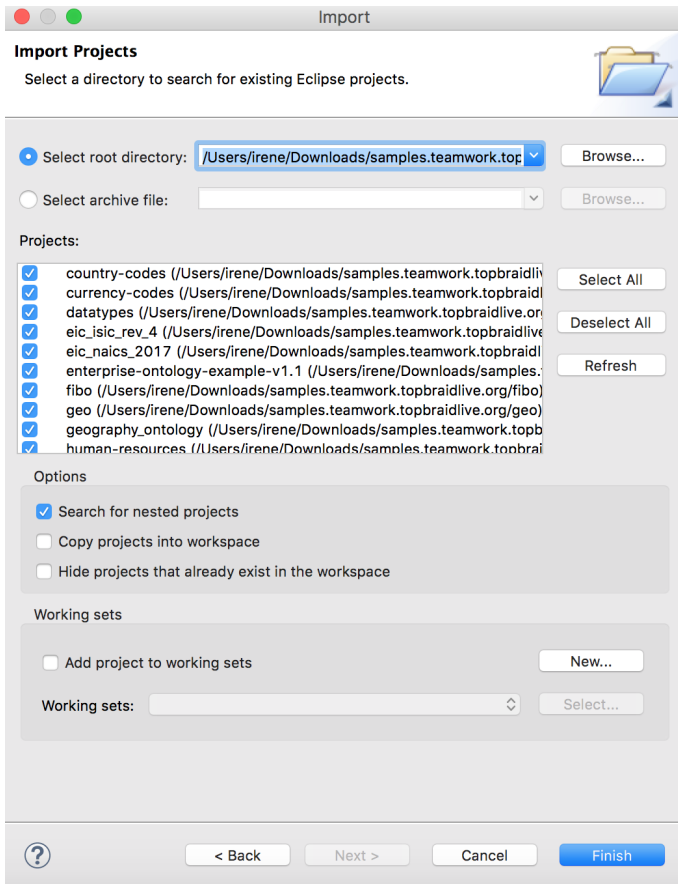

Please use these instructions when you are using the demo version of TopBraid EDG through TBCME:

1. Download samples for your version from <https://www.topquadrant.com/topbraid-composer-install/>. Unzip them.

2. From the TBC main menu select **File->Import...** In the dialog, expand **General** and select **Existing Projects into Workspace**.

3. Click the **Next** button. In the resulting dialog choose the **Select root directory** option and browse to the folder where you unzipped the file. Be sure to select the **Search for nested projects** option. It is recommended not to select the **Copy projects into workspace** option.

4. Click ***Finish***.

5. From the TBC main menu select ***TopBraid Applications Open TopBraid EDG***.

When TopBraid EDG home page is presented, select choose the ***Server Administration*** from the blue Navigation Bar at the left of the page. Go to the ***Text Indices*** page. Click on the ***Rebuild*** button. This will make sure that search indexes used for the free text and regular expression searches in the search panel are updated for the samples.

TopBraid EDG

Please use these instructions when adding samples to a server running TopBraid EDG:

1. Download samples for your version from <https://www.topquadrant.com/topbraidedg-composer-install/>. Leave them as a .zip file.
2. In EDG, navigate to **Server Administration Project Upload**. Select the samples zip file. Note, you must have administrator access to perform this operation.

Zip of project

samples.team....org (1).zip

If project already exists in workspace

Do not upload Delete old project Update old project

Notes

1. Zip must contain one folder, which is the project, and this must contain a .project file specifying the same project name.
2. If the project contains connection files (such as .sdb) please upload the project directly from TopBraid Composer.

3. The sample collections will need permission access granted to users who are not administrators.
